

M3 Michigan Made Mix

Starter Growing Instructions

1. Before adding any seeds or cuttings to the M3 check the Ph of your water. Your Ph should be right around 6.5 for ideal growing conditions of most plants. Adjust if necessary.

2. Water lightly when they are small

DO NOT OVER WATER!!!

M3 holds water for longer than most soils or mediums you may be used to.

3. We ask that you please do not add other nutrients as the M3 does have enough from start to finish

4. If you do have a strain of plant that is a heavy feeder top feed with more M3.

What's in the M3 Mix?

Our ingredients are searched the world over for quality and consistency. Bringing together fair trade ingredients from North and South America. Our nutrients are fossilized for extended release to make sure all you have to do is add water – and the nutrients will feed your plants as needed! Fortified with fossilized sea bird guano, rock phosphates, and much more – growing organically has never been easier!
